DETAILED ACTION

1. This action is in response to the amendment filed on 5/27/2008.
2. As per applicant's amendment, claims 1-4 and 6-20 are currently pending.
3. Claims 1-4 and 6-20 are allowed.
4. The following is an examiner's statement of reasons for allowance:

The amendment of the limitations of "a non-film camera" to the independent claims of 1, 8, and 14, renders moot the previous rejections of Lourette et al. (US 5,978,016), in view of Parulski et al. (US 5,633,678), further in view of Lecomte (EP 0 975 132 A1).

The closest art of record would be that of Lourette which teaches of a memorandum memorandum mode where the size of picked-up images are equal to the size of a waiting screen image in their teaching of a capture mode selector which displays picked-up images within an appropriate mask (see column 12, lines 14-53). Lourette further teaches of an album mode where the album images are greater than the image size of the waiting screen image in their teaching of a "digital image capture mode" where a full resolution digital mode image is stored (see column 12, lines 42-45). However, Lourette's system does not include generating an icon to be associated with subsequently picked-up images and does not read as being a "non-film camera" as recited in the currently amended claims.

Parulski is cited as teaching a method of generating an icon indicating that the picked-up images are registered upon initially recording the picked-up images in their teaching of their "tag icons" where their selected tag is associated with the picked-up image (see column 6, lines 54-63). Their would have been sufficient motivation for one

of ordinary skill in the art at the time the invention was made to have modified Lourette's picture taking system with Parulski's tagging method.

Lecomte is cited as teaching a “non-film camera” (see abstract). However, the examiner finds insufficient motivation that one of ordinary skill in the art at the time the invention was made would have seen it as obvious to have modified the film/non-film camera of Lourette with the purely non-film camera of Lecomte. Reasoning for this conclusion may be found in that Lourette’s teaching of a “picture memorandum mode” is associated with a user selecting a “film image capture mode”. Upon selection of this mode a subsequently picked-up image is generated with an image size equal to the size of a waiting screen because Lourette's “memorandum image” is intended to give the user a preview of previously picked-up images that are to be developed on film. As Lourette’s “memorandum mode” is dependent upon a user selecting a film image mode, there would have been no motivation at the time to have modified Lourette’s system to be a non-film camera integrated within a cellular telephone.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

-Seki et al. (US 7,154,534), image input apparatus, program executed by computer, and method for preparing document with image.

Kitamura et al. (US 2005/0231648), apparatus and method for processing image.
